Material Finishes Detail

PTFE Coating: PTFE coating is what is used on the inside of non-stick cookware and is commonly known under the brand name Teflon. This type of coating is dishwasher safe and heat safe up to 350°F but should not be exposed to direct flame. To prevent scratching, knives should not be used on the PTFE surface.

PVD Coating: PVD coating is the process of vaporizing solid materials to bond them to the surface of a product. The coating adheres at the atomic level, which creates a very thin yet durable coating. PVD finish is commercial dishwasher safe, noncorrosive, and scratch resistant.
